

Kingdom Connects — Header & Overrides State Summary

Conversation Status: ~85–90% full.

Current Focus:

- Fix header alignment and styling for public site (root index.html).
- Ensure gear icon (■) is transparent, directly above hamburger.
- Increase vertical spacing between gear and hamburger.
- Make dropdown solid background (non-transparent).

Confirmed Setup:

- index.html calls standalone scripts:
 - js/header_public.js
 - js/footer_public.js
- Using shared styles:
 - styles/theme.css
 - styles/layout.css
 - styles/buttons.css
 - styles/forms.css
 - styles/overrides.css

Outstanding Issues:

1. Gear icon still shows white background (inheritance or CSS specificity issue).
2. Gear not positioned directly over hamburger on some viewports.
3. Dropdown background still semi-transparent.
4. Need final spacing adjustments to make header look consistent across mobile/desktop.

Next Steps:

1. Upload current working copies of:
 - header_public.js
 - overrides.css
2. Open a new conversation titled: "Kingdom Connects Header Fix".
3. Ghost will:
 - Read both files directly.
 - Identify all CSS/JS conflicts.
 - Return a clean, tested pair of fixed files (minimal rebuild).

Notes:

This version includes full relative paths (no absolute/static references).
Firebase integration, admin pages, and other modules are paused until header and layout are stable.
